Prototype Document - Group 11

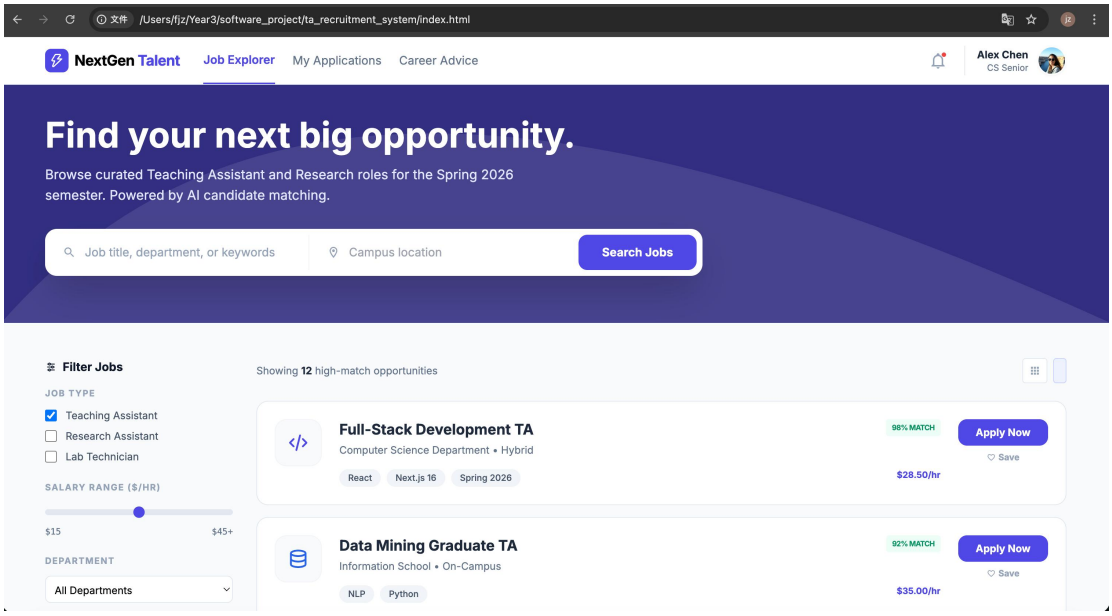
1. Prototype Overview

This prototype is designed for a job hunting and recruitment integrated platform, covering the core functional pages of job seekers and recruiters. The core pages include the platform homepage, personal/enterprise dashboard, job posting page, job application page, job detail page, personal/enterprise profile page, application management page, application status query page, and 404 error page. The low/medium-fidelity prototype realizes the basic page layout, core functional module display and simple page jump logic, meeting the basic use needs of both job seekers and recruiters.

2. Core Page Prototype Display

2.1 Index Page (Homepage)

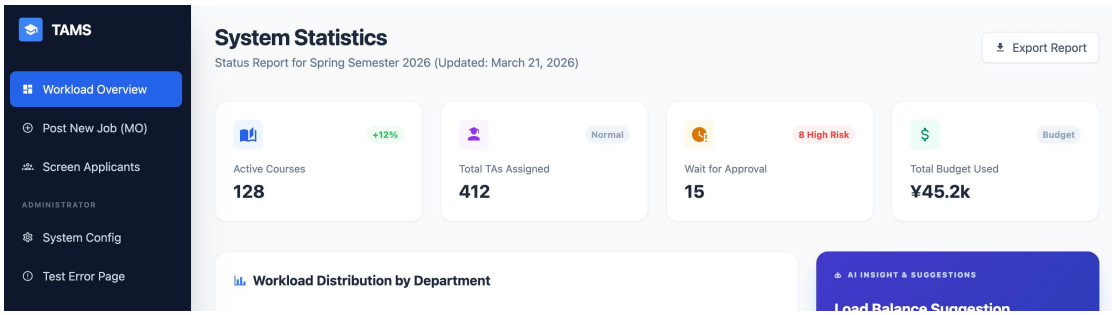
Core Functional Modules: Platform logo & navigation bar, job search box (with keyword/position/region screening), recommended hot positions, platform functional entrance (job seeker entrance/recruiter entrance), quick access to personal center, footer information.



2.2 Dashboard Page

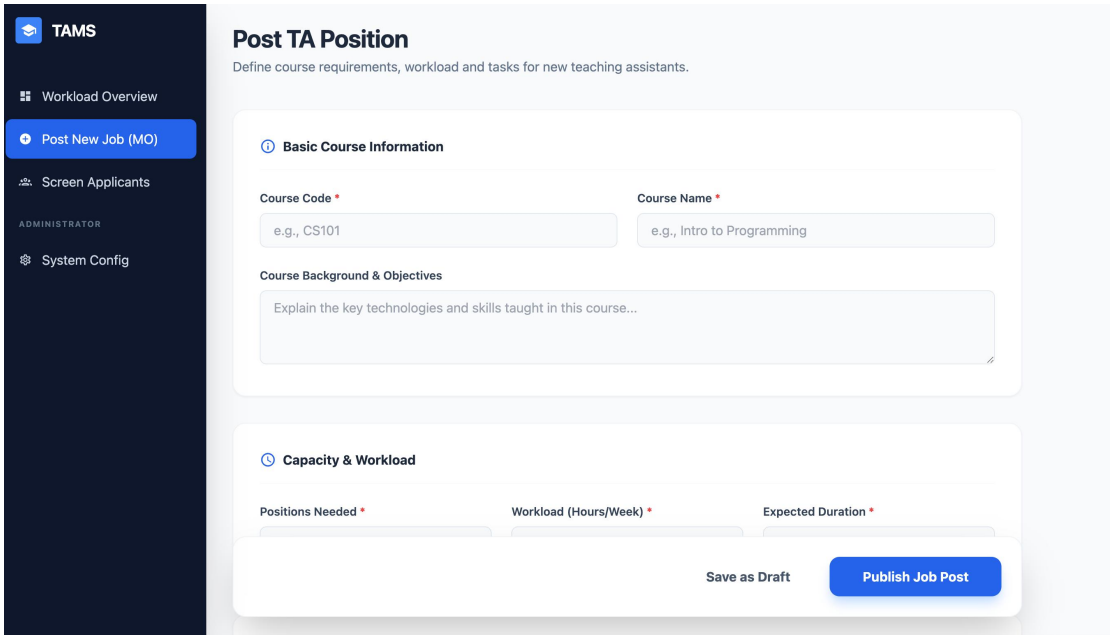
This page is divided into **Job Seeker Dashboard** and **Recruiter Dashboard** with independent module design:

- Job Seeker Dashboard: Pending application review, recently viewed positions, favorite positions, application record statistics, personalized job recommendation.
- Recruiter Dashboard: Pending resume review, newly released positions, application data statistics, enterprise recruitment analysis, resume pool entrance.



2.3 Post-job Page (Recruiter Exclusive)

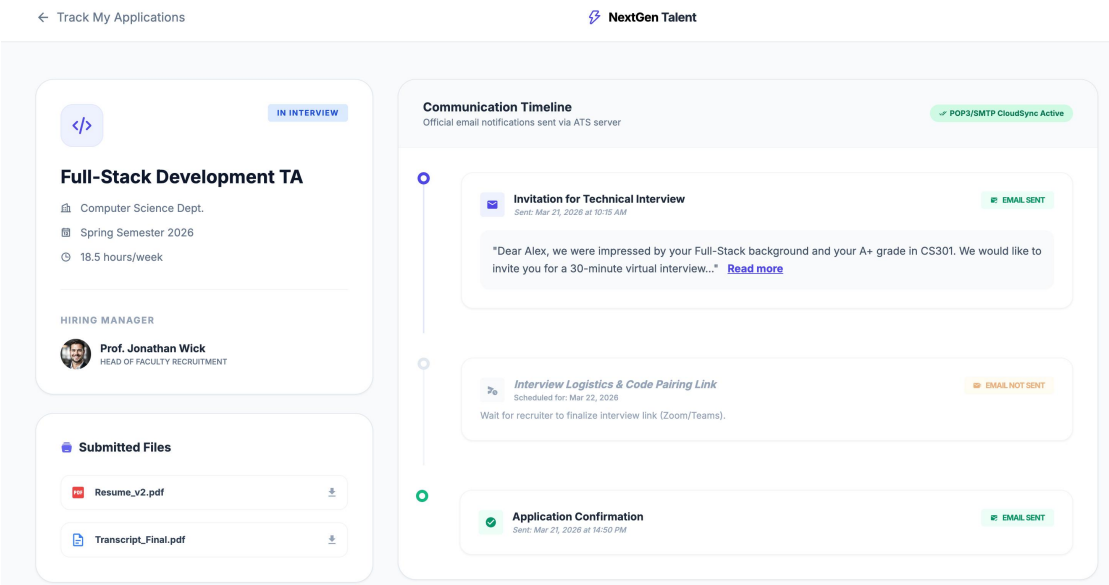
Core Functional Modules: Enterprise information verification prompt, job information filling form (position name, industry, working place, salary, job requirements, job responsibilities, recruitment quota), preview button, submit button, save draft button.



2.4 Detail Page (Job Detail Page)

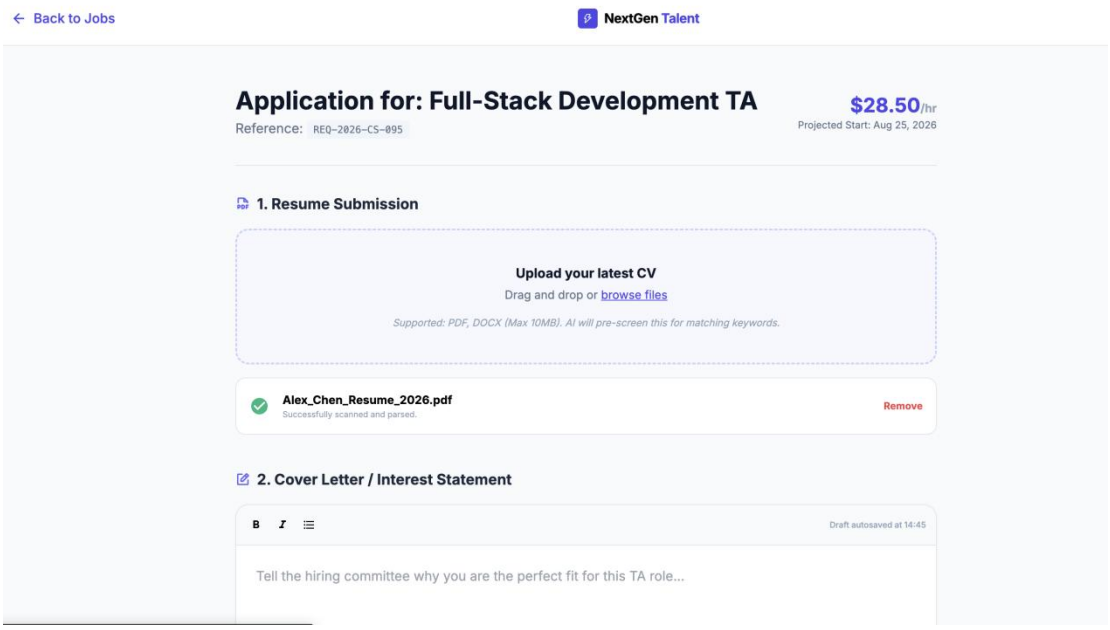
Core Functional Modules: Job basic information card (position, salary, enterprise,

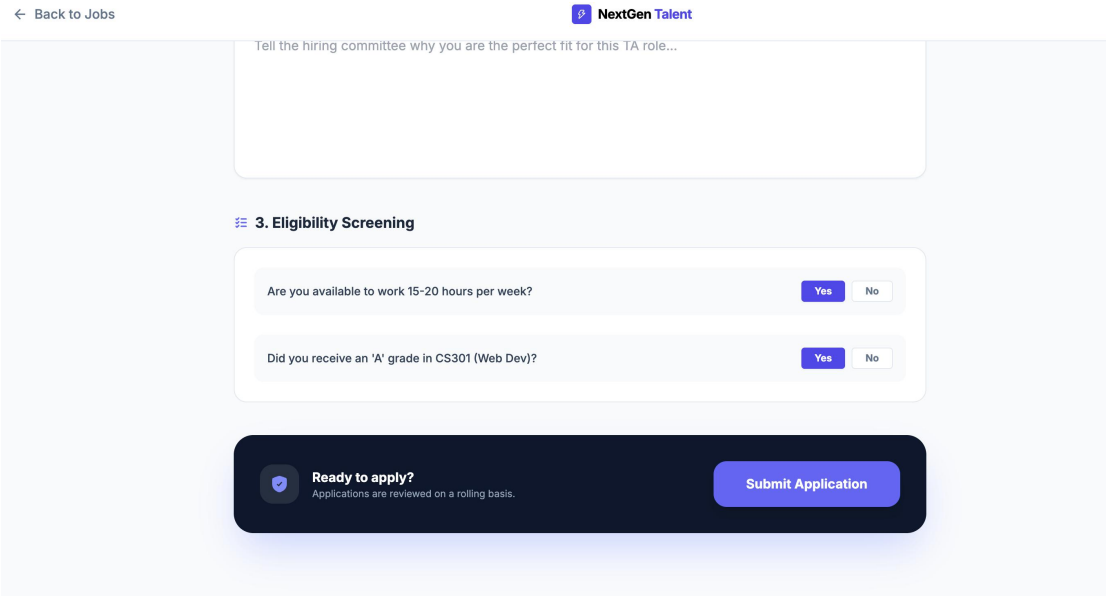
working place), detailed job responsibilities & requirements, enterprise profile brief introduction, apply immediately button, collect position button, share button, similar position recommendation.



2.5 Apply Page (Job Seeker Exclusive)

Core Functional Modules: Position information confirmation, resume selection (my resume library), additional information filling (self-introduction, expected arrival time), agreement confirmation checkbox, submit application button, return button.

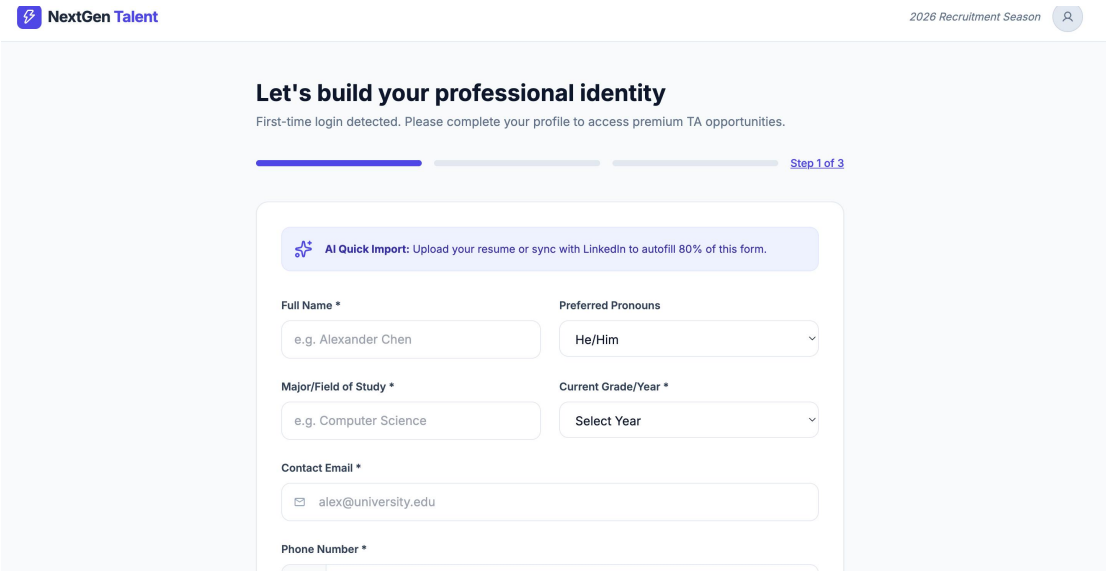


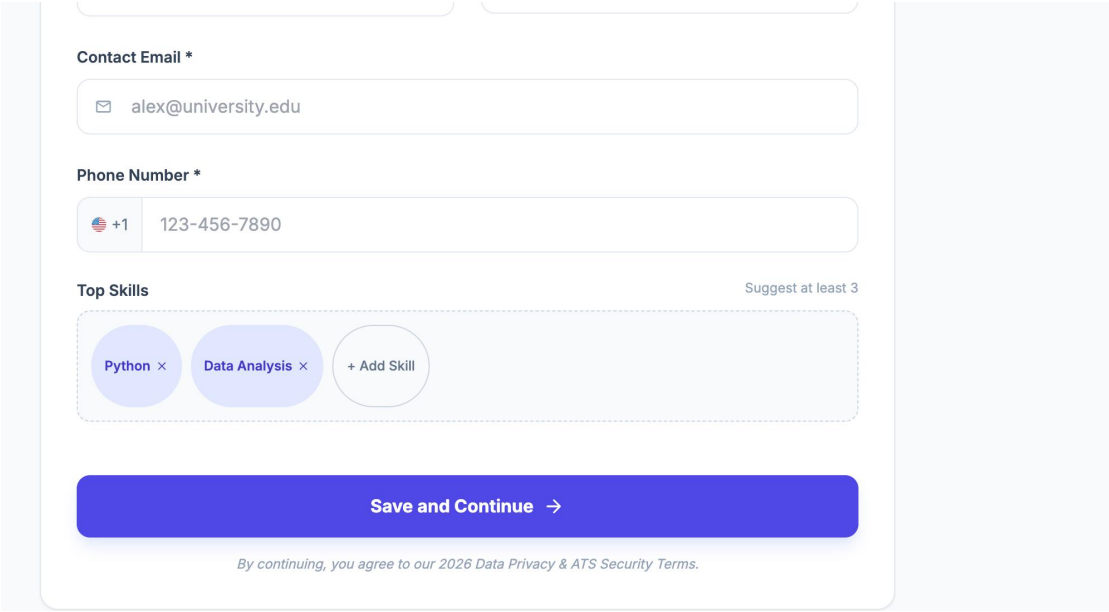


2.6 Profile Page

Divided into **Job Seeker Profile** and **Enterprise Profile** with differentiated display:

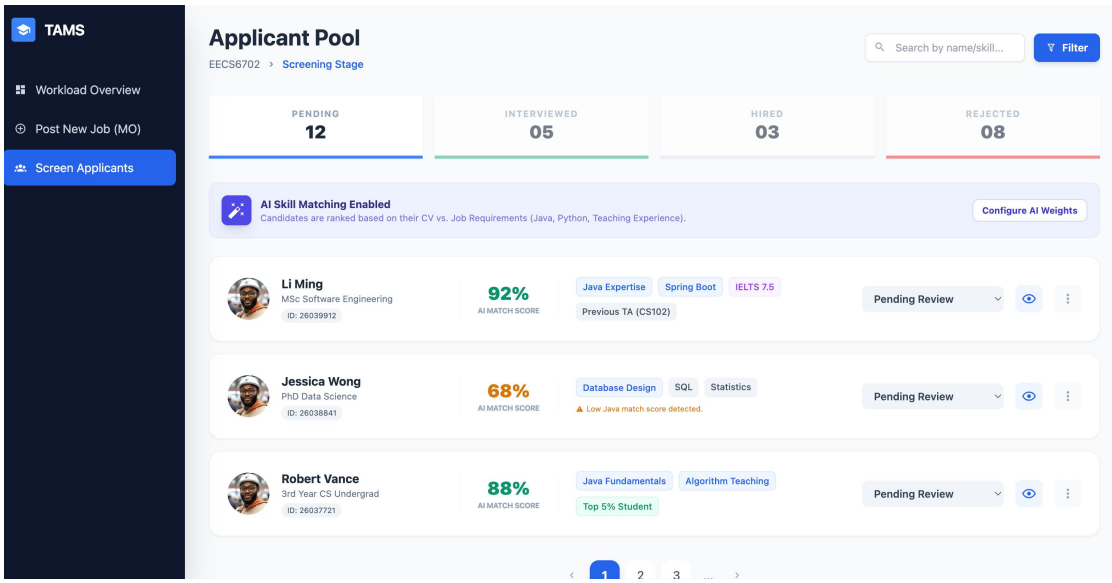
- Job Seeker Profile: Personal basic information (avatar, name, contact information), resume management (online resume, resume editing), application record, collection record, personal setting.
- Enterprise Profile: Enterprise basic information (logo, enterprise name, scale, industry), released positions management, resume pool, enterprise certification, recruitment setting.





2.7 Applications Page (Recruiter Exclusive)

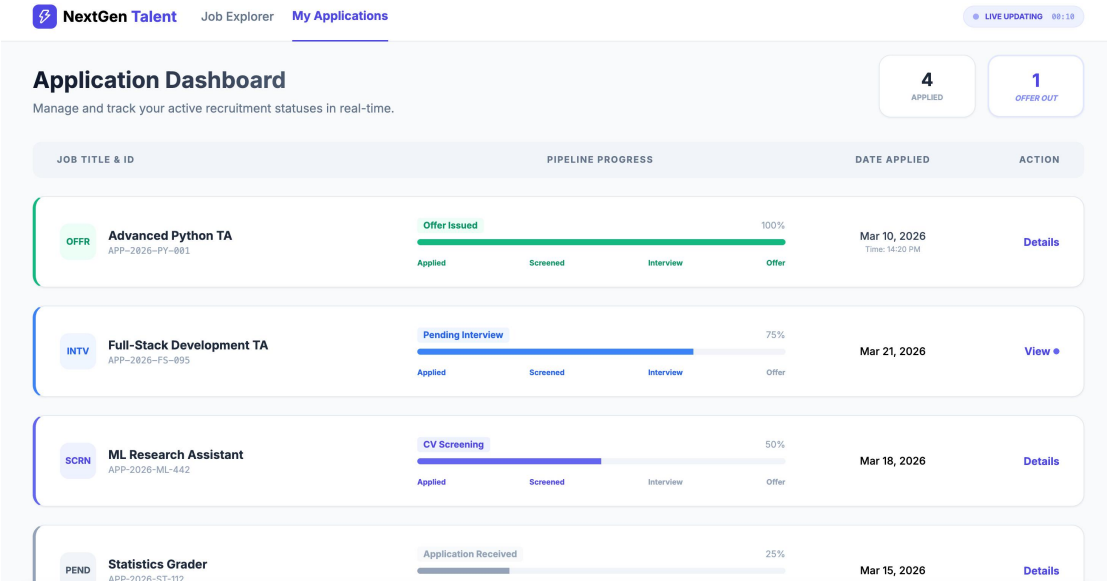
Core Functional Modules: Application list (with applicant name, applied position, resume link, application time), screening function (application status/position/ application time), batch operation (pass/reject/invite interview), single operation button for each application,
pagination.



2.8 Status Page (Job Seeker Exclusive)

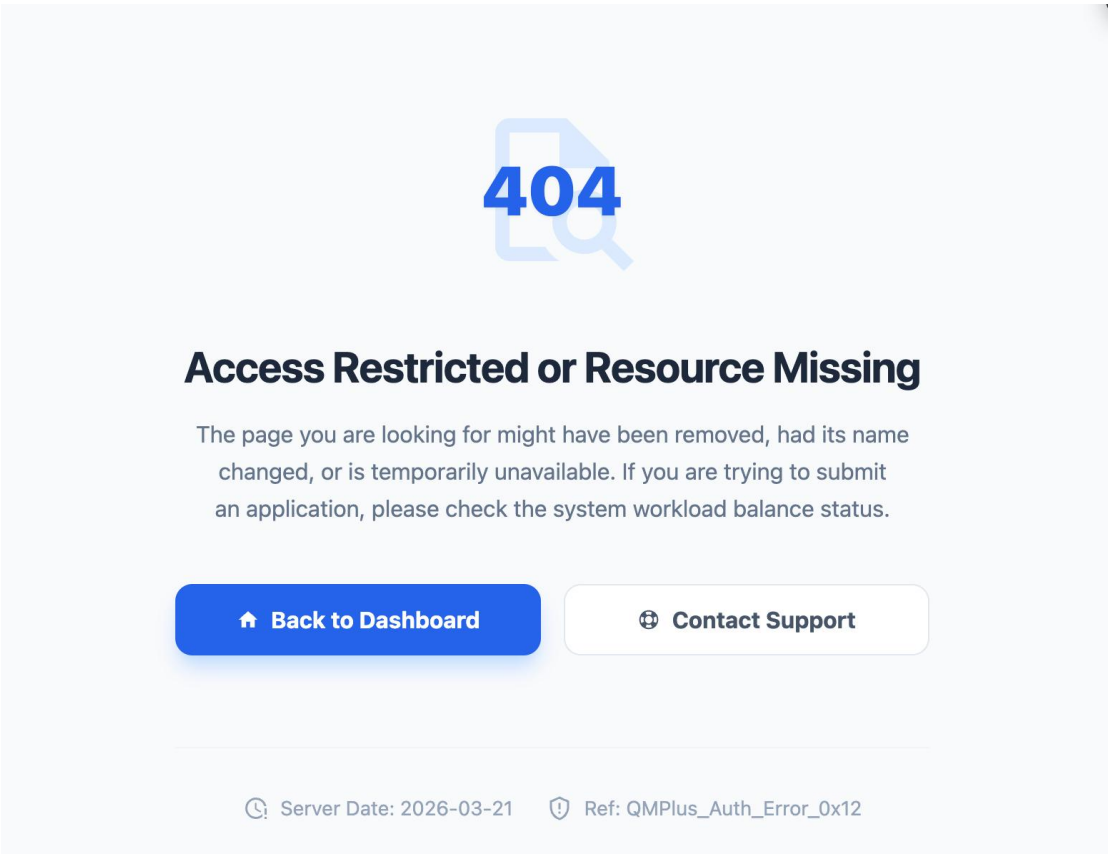
Core Functional Modules: Application status list (applied position, enterprise name, application time, current status: pending review/passed/rejected/interview invitation), status filter, position detail recheck button, withdraw application button (for pending review status),

pagination.



2.9 404.html (404 Error Page)

Core Design Elements: 404 error prompt, friendly reminder text, return to homepage button, go to dashboard button, search box (for repositioning), simple decorative pattern (in line with platform
style).



3. Basic Interaction Logic

1. Page jump: All core pages are connected through the top navigation bar and side sidebar (dashboard/profile page), and the jump path is clear (e.g., Index → Detail → Apply → Status; Index → Post-job → Dashboard → Applications).

2. Operation feedback: For core operations (submit application, post job, pass resume), the prototype sets up pop-up prompt feedback (success/failure/reminder) to ensure the user's operation perception.

3. Screening & pagination: For all list pages (Applications/Status/Index recommended positions), the basic screening and pagination functions are designed to realize the quick filtering of information.

4. Permission distinction: The exclusive pages of recruiters (Post-job/Applications) and job seekers (Apply/Status) are set with permission prompts, and non-corresponding users will see the permission error prompt when accessing.

4. Prototype Completion Instructions

This low/medium-fidelity prototype covers all core pages of the platform (corresponding to the html page names of the system error report), and completes the design of core functional modules, page layout and basic interaction logic for each page. The prototype meets the basic design requirements of the job hunting and recruitment platform, and can be further optimized to a high-fidelity prototype by supplementing visual design elements (colors, fonts, icons) and perfecting detailed interaction effects according to actual needs.
